Panel processing

Leitz Lexicon Edition 7

Version 2

Explanation of abbreviations

A	= dimension A	LH	= left hand rotation
a_e	= cutting thickness (radial)	M	= metric thread
a_p	= cutting depth (axial)	MBM	= minimum order quantity
ABM	= dimension	MC	= multi-purpose steel, coated
APL	= panel raising length	MD	= thickness of knife
APT	= panel raising depth	min^{-1}	= revolutions per minute (RPM)
AL	= working length	MK	= morse taper
AM	= number of knives	m min^{-1}	= metres per minute
AS	= anti sound (low noise design)	m s^{-1}	= metres per second
b	= overhang	n	= RPM
B	= width	$n_{\max.}$	= maximum permissible RPM
BDD	= thickness of shoulder	NAL	= position of hub
BEM	= note	ND	= thickness of hub
BEZ	= description	NH	= zero height
BH	= tipping height	NL	= cutting length
BO	= bore diameter	NLA	= pinhole dimensions
CNC	= Computerized Numerical Control	NT	= grooving depth
d	= diameter	P	= profile
D	= cutting circle diameter	POS	= cutter position
D0	= zero diameter	PT	= profile depth
DA	= outside Diameter	PG	= profile group
DB	= diameter of shoulder	QAL	= cutting material quality
DFC	= Dust Flow Control (optimised chip clearance)	R	= radius
DGL	= number of links	RD	= right hand twist
DIK	= thickness	RH	= right hand rotation
DKN	= double keyway	RP	= radius of cutter
DP	= polycrystalline diamond	S	= shank dimension
DRI	= rotation	SB	= cutting width
FAB	= width of rebate	SET	= set
FAT	= depth of rebate	SLB	= slotting width
FAW	= bevel angle	SLL	= slotting length
FLD	= flange diameter	SLT	= slotting depth
f_z	= tooth feed	SP	= tool steel
$f_{z \text{ eff}}$	= effective tooth feed	ST	= Cobalt-basis cast alloys, e.g. Stellit®
GEW	= thread	STO	= shank tolerance
GL	= total length	SW	= cutting angle
GS	= Plunging edge	TD	= diameter of tool body
H	= height	TDI	= thickness of tool
HC	= tungsten carbide, coated	TG	= pitch
HD	= wood thickness (thickness of workpiece)	TK	= reference diameter
HL	= high-alloyed tool steel	UT	= cutting edges with irregular pitch
HS	= high-speed steel (HSS)	V	= number of spurs
HW	= tungsten carbide (TCT)	v_c	= cutting speed
ID	= ident number	v_f	= feed speed
IV	= insulation glazing	VE	= packing unit
KBZ	= abbreviation	VSB	= adjustment range
KLH	= clamping height	WSS	= workpiece material
KM	= edge breaker	Z	= number of teeth
KN	= single keyway	ZA	= number of fingers
KNL	= combination pinhole consists of 2/7/42 2/9/46,35 2/10/60	ZF	= tooth shape (cutting edge shape)
L	= length	ZL	= finger length
I	= clamping length		
LD	= left hand twist		
LEN	= Leitz standard profiles		

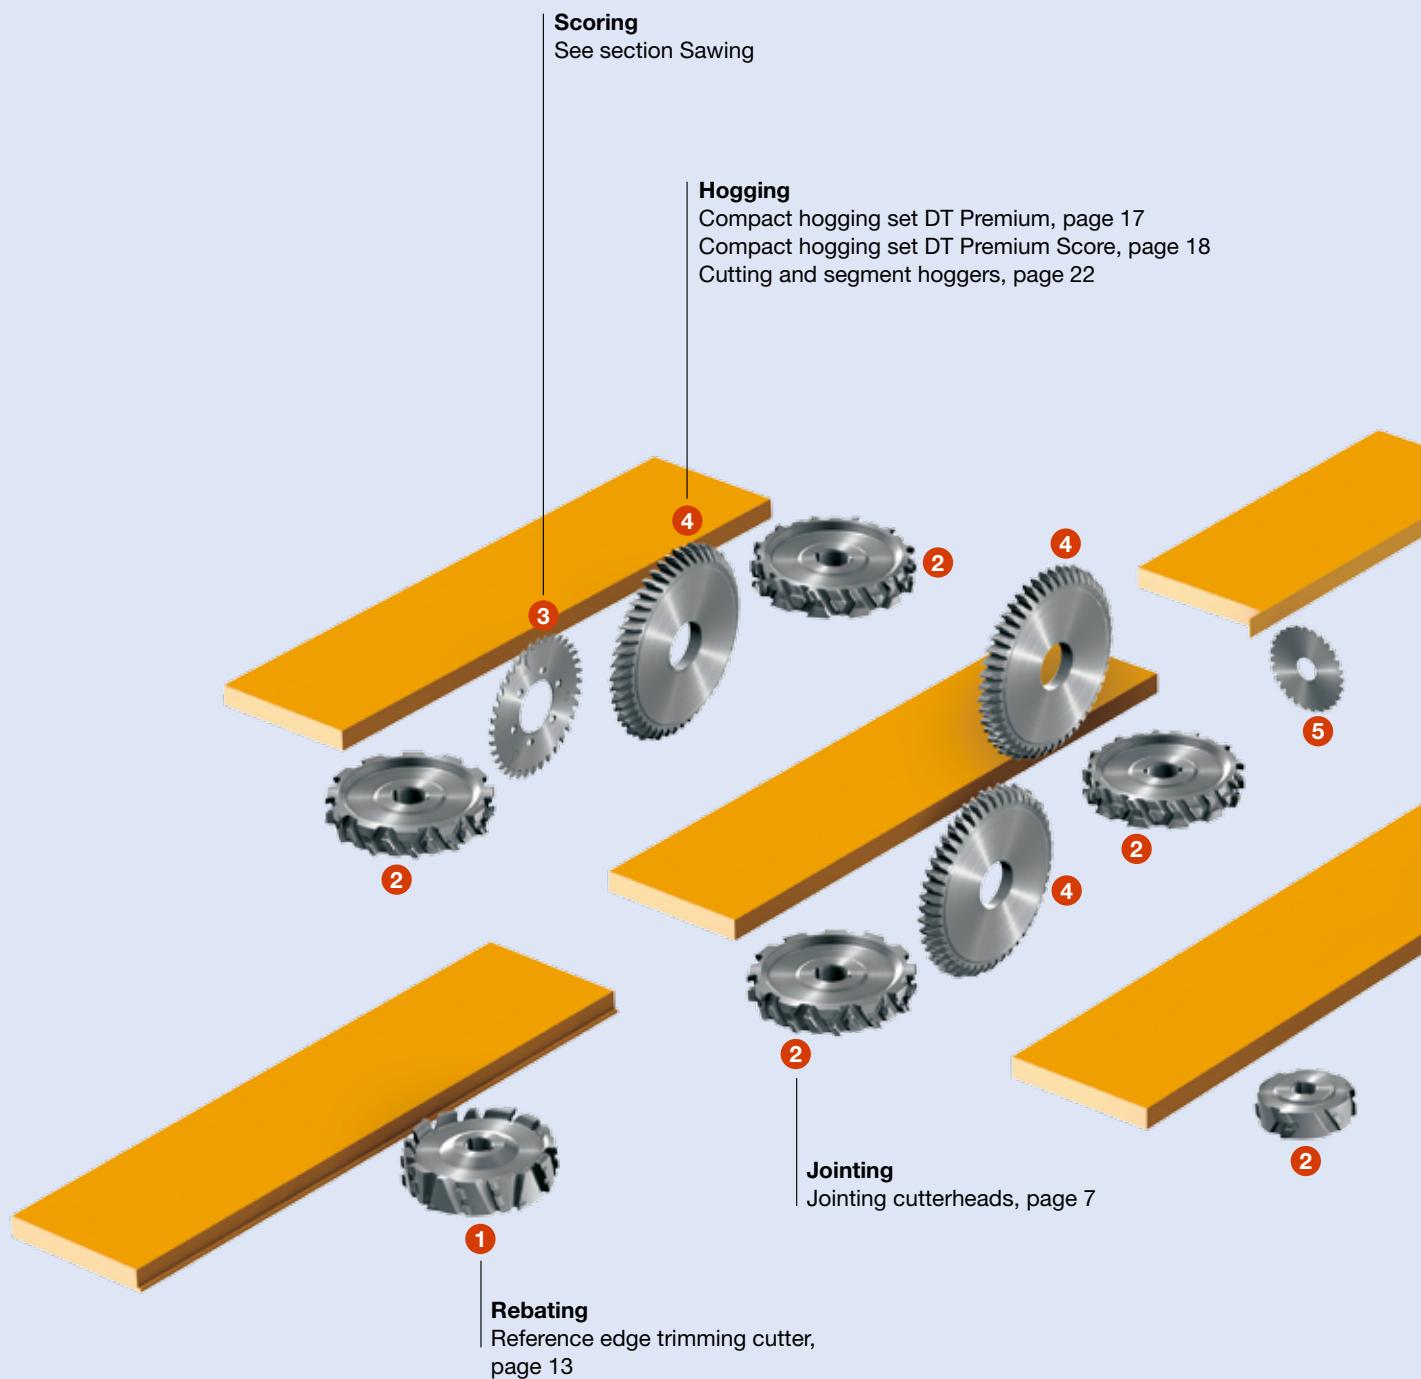

Notes to the Lexicon concerning the diagrams and tables

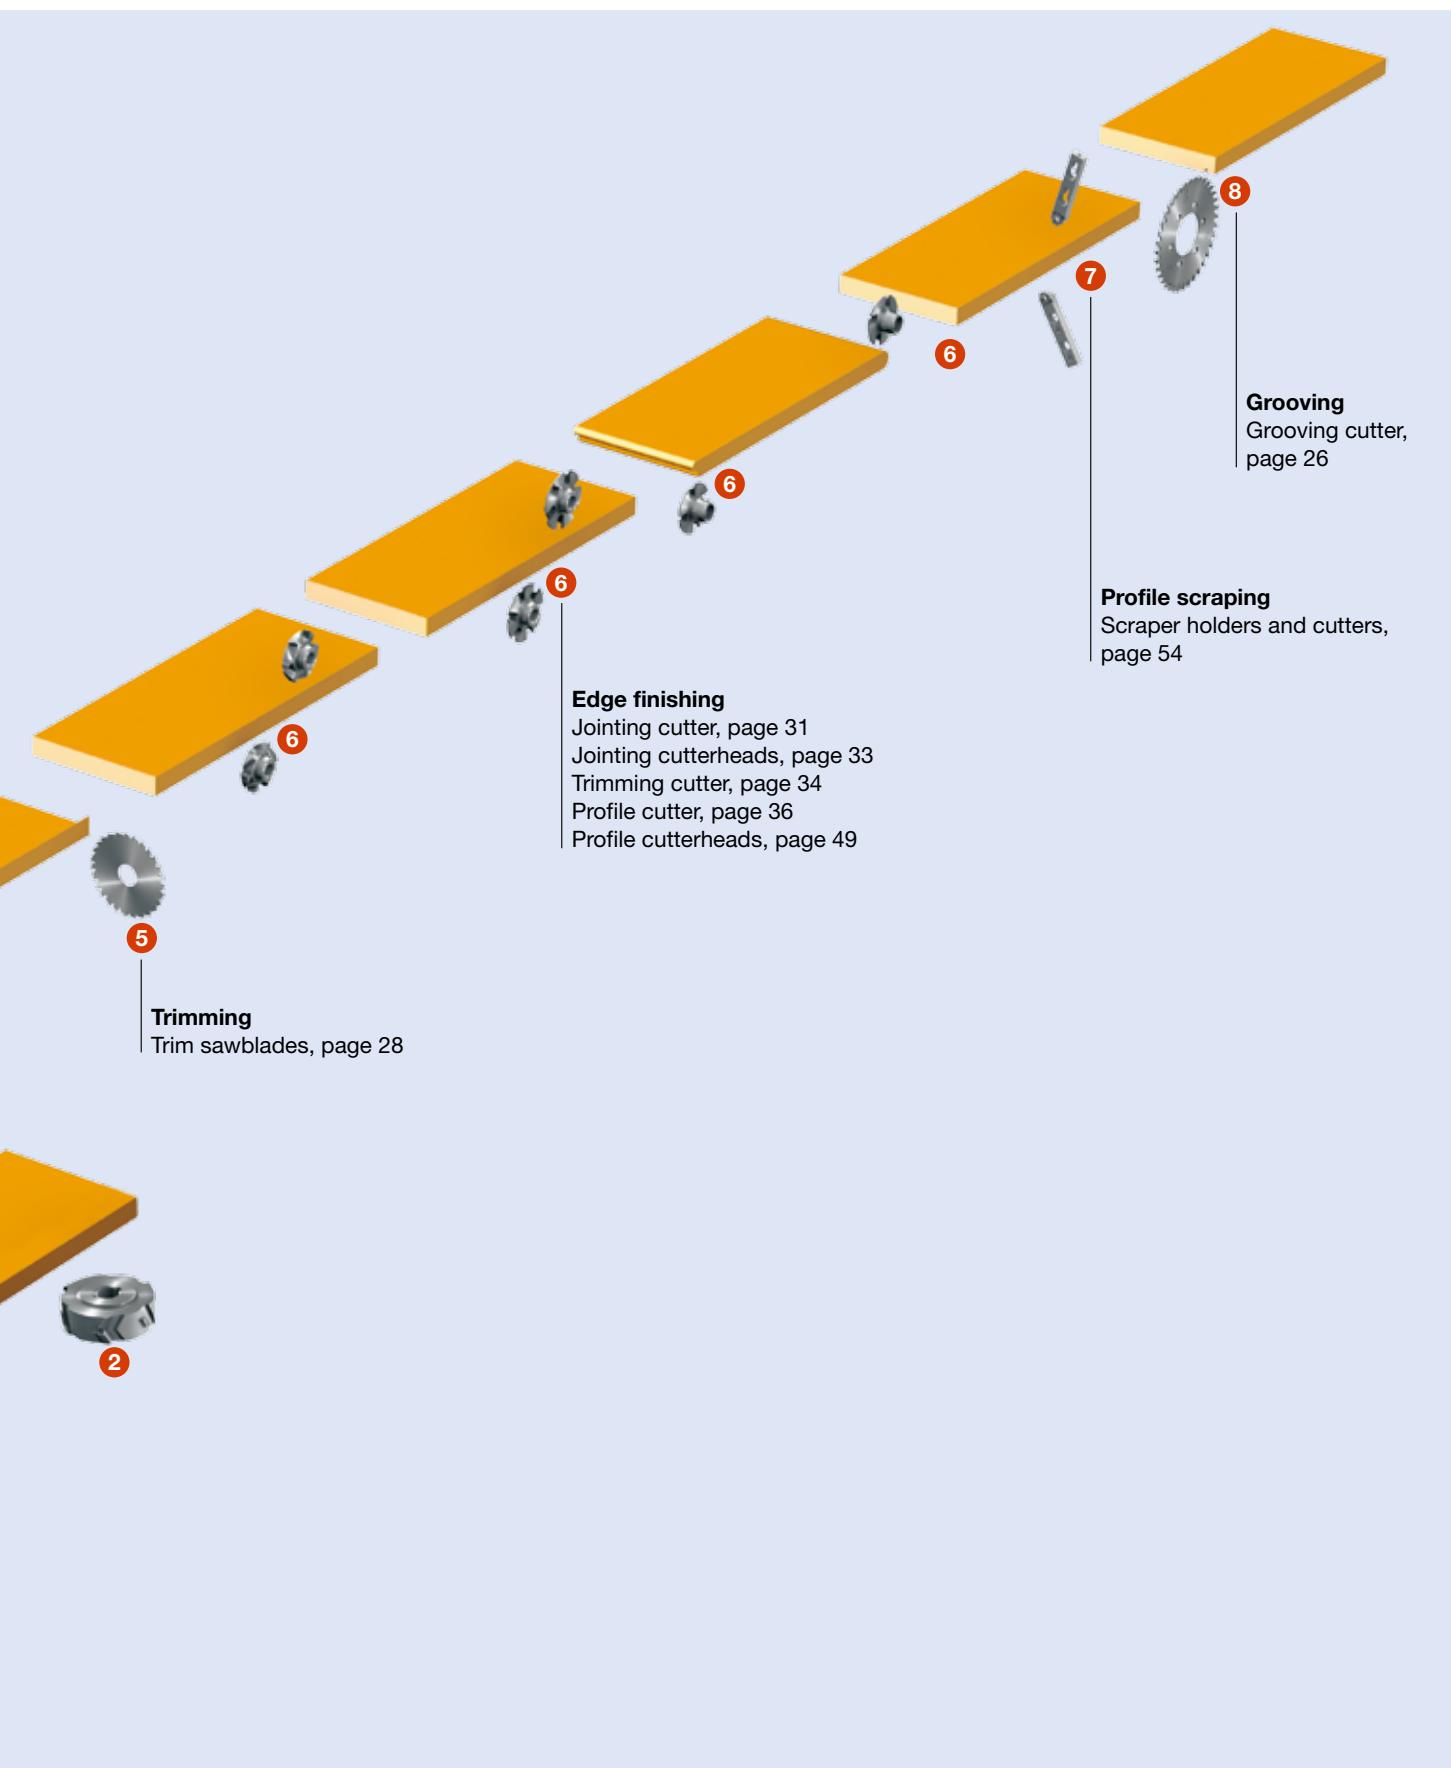

The statements made in the diagrams and tables relate to specific conditions and represent parameters from tests subjected to defined conditions. Variations when using tools in individual case due to special application conditions may be possible. Our support team will provide you with detailed information.

2. Panel processing

2.1 Edge processing

2.1.2 Jointing cutters

Type of operation	Cutting of the finished size with pre-sized, panel shaped working pieces. Therefore the jointing tools only are peripheral cutting and not with side relief!
Workpiece material	Softwood and hardwood, glulam, chipboard and fibre material, uncoated and veneered, plastic and paper coated.
Machines	Spindle moulders, edgebanding machines with sizing part, double end tenoners. Counter milling or jump cutting: Depending on the processing quantity and material, diamond tools or cutterheads with tungsten carbide turnblades are used.
Application	Jointing against feed: For all panel working materials with or without coating. Jointing with feed: For machining solid wood with heavily irregular course of fibres and risk of tear outs. Only allowed for machines with mechanical feed. Note: Chips are very difficult to remove. Jump cutting: Jointing with and against feed when cutting across, to prevent tear outs on the front and backside of the workpiece when these are already glued.

Tool Designs

Turnblade cutterhead with alternate shear angle:
Suitable for all coated and uncoated panel shaped working materials. Turnblade tools with shear angle produce a curved surface on the workpiece. For exactly straight jointing edges we recommend ProfilCut profile cutterheads with profiled edges (special production) or diamond jointing cutters.

Diamond jointing cutter with alternate shear angle:
S = with symmetrical edge arrangement: Produce a slight hollow section on the milled jointing edge. This has the advantage that the edgebanding on the outside edge close tightly. The tool always must be adjusted symmetrically to the workpiece thickness. The tool can be used in RH and LH rotation.
AS = Asymmetrical edge arrangement: One cutting edge cuts from bottom to top, the top cutting edges all are directed downward which is advantageous for frequently changing material thicknesses.

2-part tools on synchronically adjustable sleeve:
These tools with alternate shear angles are advantageous for high quantities and nearly constant workpiece thicknesses as with increasing tool blunting the jointing edges on the coating do not remain tear-free. The stepless and synchronic adjustment allows the use of multiple performance times and thus an increase of the tool lifetime.

Diamaster WhisperCut

Diamaster WhisperCut – The lightweight and efficient jointing cutterhead for low noise sizing of panel material.

Advantages at a glance:

- Significant noise reduction of up to 5 dB(A) through optimized tool body shape and weight halving
- Trouble free chip ejection and excellent chip collection through DFC technology
- Individual use as per customer requirement: resharpenable or as changing knife system

2. Panel processing

2.1 Edge processing 2.1.2 Jointing cutters

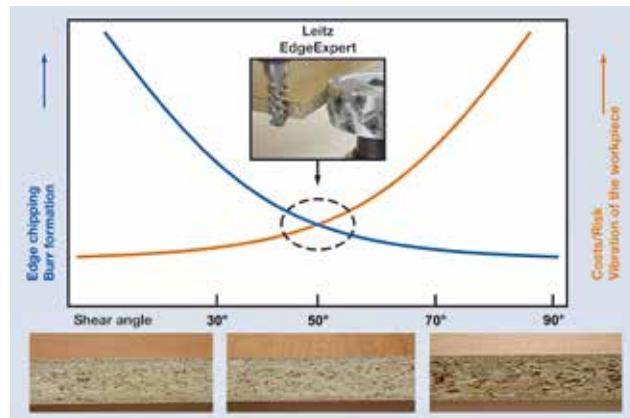

Diamaster EdgeExpert

Diamaster EdgeExpert – The expert for top edge performance especially in case of demanding decors.

In interior design and furniture manufacture, the use of processed material surfaces is increasing in both use and importance. This requires new tool concepts such as the Diamaster EdgeExpert program from Leitz. Whether very thin paper decors, veneers or foil- and high-gloss coating, the Diamaster EdgeExpert enables tear-free edges and even middle layer on continuous machines and CNC machining centres. Especially suitable for zero-joint edging technology with laser, plasma or hot air.

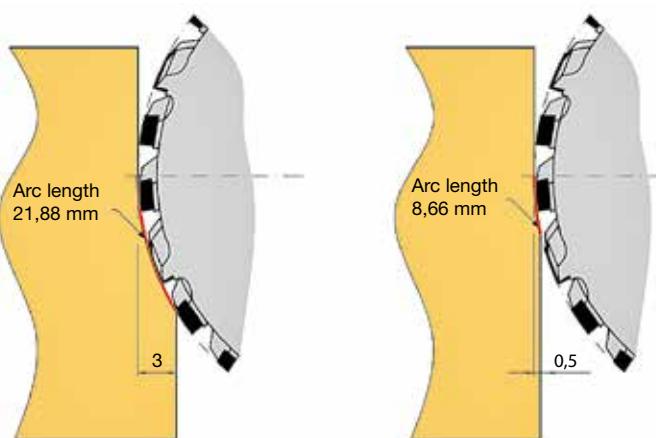

Dust collection

The tool characteristics of the joint cutter Diamaster PRO low noise model range have DFC gullet for delayed chip ejection and are suitable for i-system.

Chip removal

The chip removal has an important influence on the machining quality and on the tool life. Through a reduction of the chip removal, the arched length of the tool positioned in the interference is decreased, causing the tool to cut less material and to increase the tool life.

2. Panel processing

2.1 Edge processing

2.1.2 Jointing cutters

Noise emission

For noise reduction, LowNoise tools Diamaster PRO with its low knife protrusion, staggered edge and shear can be used. See section Edge Processing - Jointing Cutters.

Service

The Diamaster WhisperCut knives either can be serviced by Leitz Service or by the user on site.

Resharpening Diamaster WhisperCut

WhisperCut: Diamond knives are resharpenable in the tool body up to 3 times

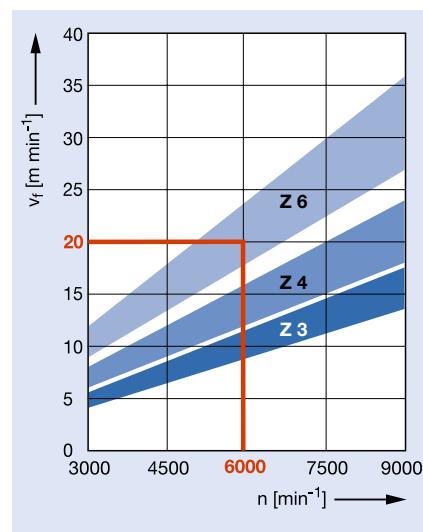

WhisperCut PLUS: Diamond knives are resharpenable in the tool body up to 10 times

Diamaster WhisperCut – The jointing cutterhead with exchangable knives

- constant diameter
- quick and easy knife change by the user on site
- no costly adjustment at the machine
- no interchangeable tool required
- optimal knife utilization with small material thicknesses

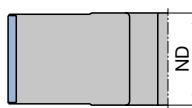

Feed speed related to RPM and number of teeth Z

Material: Chipboard with melamine resin coating

WhisperCut jointing / milling cutter - cutterhead design

Application:

For tear-free and low noise jointing of workpiece edges side with and against feed (jump cutting).

Machine:

Edgebanding machines, copy shaping machines, double-end tenoners etc.

Workpiece material:

Chip and fibre board (MDF etc.) uncoated, veneered, plastic and paper coated, fibre reinforced plastics (GFRP, CFRP etc.).

Technical information:

DP tipped cutterhead with alternate shear angle for tear-free jointing edges and cutting surfaces. Tool with knife arrangement S can be used left and right and produces hollow cut for tightly closing edgebanding. Low noise design with up to 5 dB(A) noise reduction and highly efficient chip collection (>95%) by DFC. Significant weight reduction by using an aluminium alloy tool body. Carrier body for multiple use with exchangeable knives. 0.6 mm resharpening area.

Diamaster WhisperCut - DFC, LowNoise, aluminium alloy tool body

WhisperCut jointing / milling cutter - cutterhead design

Application:

For tear-free and noise reduced jointing of workpiece cutting surfaces with and against feed (jump cutting) particularly for sensitive decorative papers, foil coatings and veneers.

Machine:

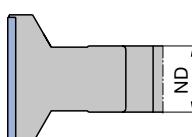

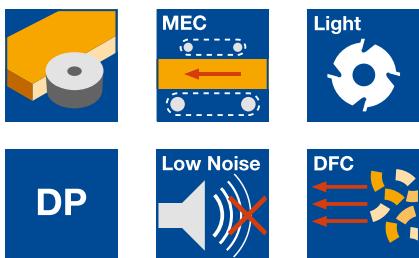

Edgebanding machines, copy shaping machines, double-end tenoners etc.

Workpiece material:

Chip and fibre boards (MDF etc.) raw, veneered, painted and coated; especially for plastic, paper, HPL and anti-fingerprint coatings. Also suitable for surfaces in mat, high gloss or with relief structures.

Technical information:

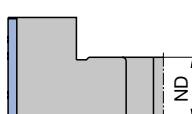

DP tipped cutterhead with alternate shear angle for tear-free jointing edges and cutting surface. Increased shear angle for excellent edge quality on sensitive decorative papers, foil coatings and veneers. Tool with knife arrangement S can be used lefthand and righthand and produces a hollow cut for tightly fitting edgebanding. Noise reduced design with up to 5 dB(A) noise reduction and highly efficient chip collection (>95%) through DFC. Significant weight reduction by using an aluminium alloy tool body. Carrier body for multiple use with exchangeable knives. 0.6 mm resharpening area.

Jointing / milling cutter on hydro sleeve

Application:

For tear-free and low noise jointing of workpiece edges side with and against feed (jump cutting).

Machine:

Edgebanding machines with zero joint technology.

Workpiece material:

Chip and fibre board (MDF etc.) uncoated, veneered, plastic and paper coated, fibre reinforced plastics (GFRP, CFRP etc.).

Technical information:

Increase of the processing quality through zero clearance hydro adaptor. Tool with alternate shear angle for tear-free jointing edge and straight cutting surface. Low noise design with noise reduction up to 5 dB(A) and highly efficient chip collection (>95%). Tool with knife arrangement S produces hollow cut for tightly closing edgebanding.

Diamaster PRO mounted on hydro sleeve

2. Panel processing

2.1 Edge processing 2.1.2 Jointing cutters

Type S = symmetric knife arrangement

Jointing / milling cutter on HSK-F 63 arbor

Application:

For low noise jointing of workpiece edges with and against feed (jump cutting).

Machine:

Edgebanding machines with zero joint technology.

Workpiece material:

Chip and fibre board (MDF etc.) uncoated, veneered, plastic and paper coated, fibre reinforced plastics (GFRP, CFRP etc.).

Technical information:

Increase of the processing quality through zero clearance HSK adaptor. Composite tool with alternate shear angle for tear-free jointing edge and straight cutting surface. Low noise design with noise reduction up to 5 dB(A) and highly efficient chip collection (>95%). Tool with knife arrangement S produces hollow cut for tightly closing edgebanding. 1.5 mm resharpening area.

Diamaster PRO mounted on HSK-F 63 mod.

2. Panel processing

2.1 Edge processing 2.1.3 Compact hoggers - DP

Process	Hogging along and across the grain, sizing.
Workpiece materials	Chipboard and fibre materials (MDF) uncoated, with plastic or veneer coating.
Machines	Single sided, double-sided machines and double-end tenoners.
Application	Both sizing processes "double hogging" and "scoring/hogging" require two basic hogging types with different cutting geometries: Diamaster DT Premium – Double hogging with feed and negative rake angle and Diamaster DT Premium Score – Scoring/cutting with against feed with positive cutting angle.

Double hogging: Both hoggers cut with feed.

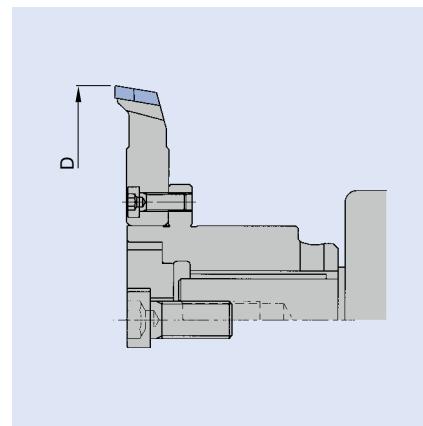

Scoring/hogging: Scoring saw cuts with feed, hogger against feed.

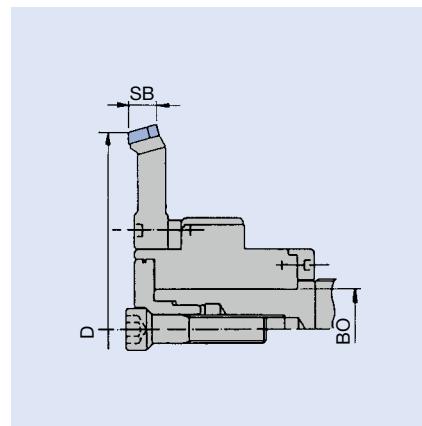

Compact hogger DT Premium	Manufacturers are facing major challenges due to their customers demanding changing quantities as well as requesting a wide variety of carrier and decorative materials to be used in panel production. The new DT Premium compact hogger is the solution for increasing productivity thanks to its long tool life – with perfect quality on the edge and cutting surface.
	<p>-20 % machining costs due to longer tool life</p> <p>15-times resharpenable</p>
Productivity & efficiency	<p>Maximum economic efficiency through long tool life</p> <ul style="list-style-type: none"> - Long tool life even under difficult operating conditions thanks to new tooth shape - Reduction of set-up costs due to long tool life - Efficient chip removal due to innovative gullet geometry and integrated chipbreaker - Cost efficient processing of various materials - Ideal also for batch size 1 due to adapted cutting geometries - Resharpenable up to 15 times through larger resharpening area

Quality	Perfect edges and cutting surfaces <ul style="list-style-type: none"> - Excellent edge quality and smooth cutting surfaces through adapted cutting geometries - Clean workpiece finishes due to efficient chip removal with DFC®-Technology - Constant cutting width over the entire life cycle

* Recommended feed rate.

Tooth with decreasing bevel for higher cutting performance, particularly suitable for material with a loose middle layer.

Tooth with increasing bevel for maximum stability, particularly suitable for materials with high mineral content and boards with large material overhang. At decreasing bevel and low overlap remain strips, which won't be hogged.

Compact hogger

Application:

For hogging along and across grain - for sizing applications in double hogging process (**hogging / hogging**).

Machine:

Double-end tenoners, edgebanding machines etc.

Workpiece material:

Particle and fibre materials (MDF etc.) uncoated, veneered, plastic and paper coated, lightweight panels (honeycomb).

Technical information:

Resharpenable 10 times. **Tooth with decreasing bevel** for higher cutting performance, particularly suitable for materials with a loose middle layer. **Tooth with increasing bevel** for maximum stability, particularly suitable for materials with high mineral content and boards with a large material overhang.

For mounting on hydro clamping or hydro quick clamping sleeve

Feed speed v_f in relation to the number of teeth Z and RPM n .

2. Panel processing

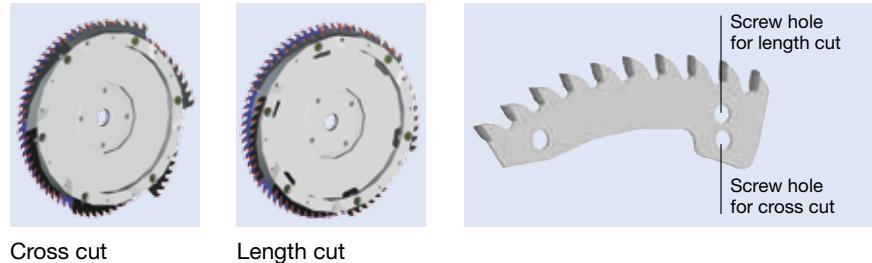

2.1 Edge processing

2.1.4 Cutting and segment hoggers

Segment hogger

Segment hoggers are a modular design. Segment hoggers are used, depending on the diameter, for hogging widths from 25 to 70 mm. Hoggers or segment hoggers combined with different circular sawblades are suitable for cutting the following materials along and across the grain:

- Solid wood
- Wood derived materials without coating
- Wood derived materials with coating, with veneer, with paper etc.
- Composite materials

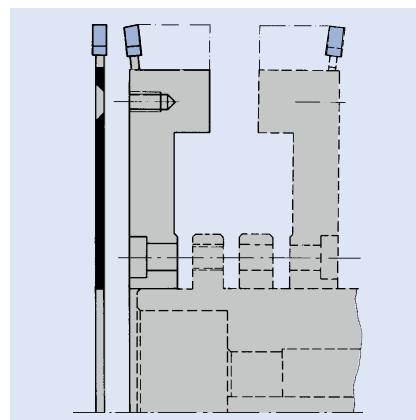

Cross cut Length cut

The hogging segments in segment hoggers are set either for length and or cross cut. The cross cut setting reduces the risk of breaking the corner of the workpiece when cross cutting against the feed. Segment hoggers with up to 12 segments are used for edging and sizing on wood-derived material production lines (e.g. Siempelkamp, Kontra etc.). A special segment hogger design has been developed for the finish cut on wood derived material production lines.

Saw hogger

Saw hoggers, single tools or assemblies with cutting widths of 6.35 - 12.00 mm are used for hogging along and across the grain and to size solid wood on finger jointing machines.

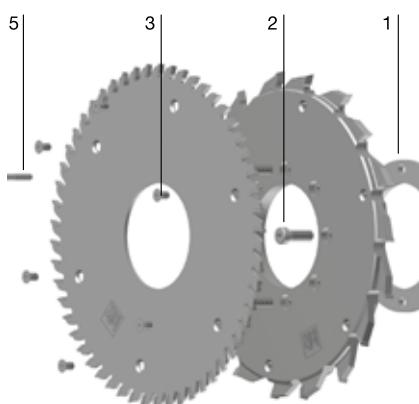

Assembly design/examples

Segment hogger with extension hogger.

2.1 Edge processing

2.1.4 Cutting and segment hoggers

Hoggers

Application:

For tear-free sizing along and across grain. Machining against feed only combined with scoring sawblade. Defined trimming in front of the finger cut for adjusting the finger fit.

Machine:

Double-end tenoner, finger joint machine with trimming aggregate.

Workpiece material:

Solid wood and wood derived materials.

Technical information:

Steel tool body with HW circular sawblade and hogger elements mounted on flanged sleeve. Can be extended for larger hogger widths. Single sided bevel tooth shape reduces tear outs.

2.1.5 Grooving cutters

Grooving with feed

Cutting rear panel grooves

Straight cut composite tool for grooving with feed (MEC).

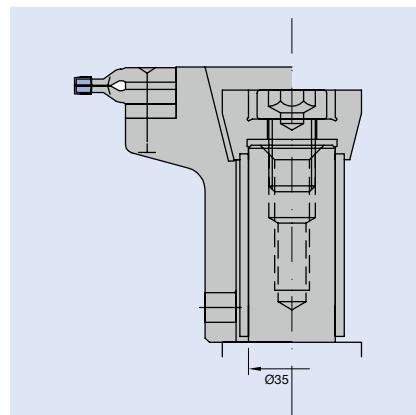

Grooving against feed

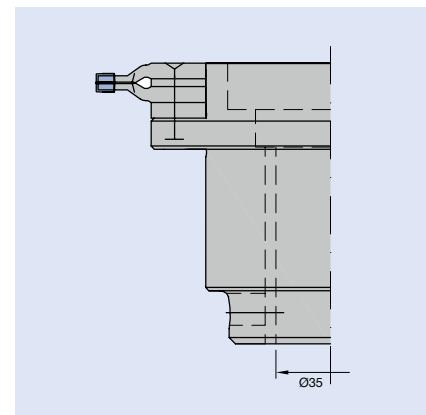

For tear-free cutting of different grooving widths on spindle moulders, moulders, edgebanding machines and double-end tenoners in uncoated and coated wood derived materials.

Adjustment of the cutting width with spacers (adjustment steps 0.1 mm). High chip collection by working against feed. Feed speed up to 40 m min⁻¹. Constant grooving width and distances to the machine chain also after regrinding. Special cutting geometry for tear-free cuts. Suitable to mount on sleeves with bore 30, 35 and 40 mm. Tipping height 6.0 mm.

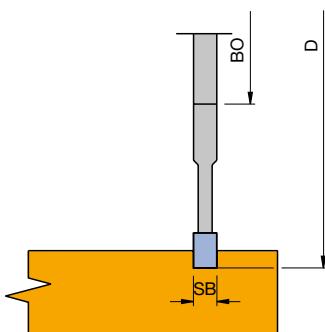

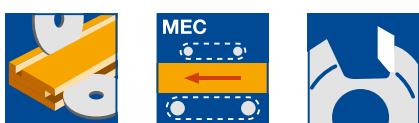

Tools for grooving against feed available on request.

Assembly example:
Spindle 30 KN or DKN

Assembly example:
Spindle 35 KN or DKN

Grooving cutter for mechanical feed

Application:

Grooving with feed (climb cut).

Machine:

Moulders and double-end tenoners.

Workpiece material:

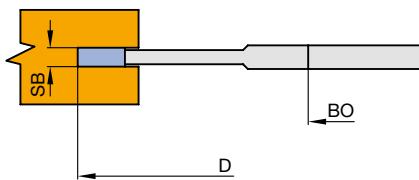

Solid wood, uncoated, coated and veneered wood derived materials.

2.1 Edge processing

2.1.6 End trim sawblades

Circular sawblade for end trim on edgebanding machines

Application:

For low noise edgebanding trim cuts.

Machine:

Single or double-sided edgebanding machines and double-end tenoners.

Workpiece material:

Softwood, hardwood, veneered, melamine and plastic edging.

Technical information:

Tooth geometries and pitch designed for optimum cutting quality.

Veneered and plastic edging:

Edging thickness ≥ 2.0 mm - crosscut saw ES pos.

Edging thickness < 2.0 mm - crosscut saw ES neg.

Solid wood edging and multi-purpose application:

Edging thickness ≥ 2.0 mm - crosscut saw WZ pos.

Edging thickness < 2.0 mm - crosscut saw WZ neg.

Circular sawblade - LowNoise

* = For 2 part set SK 499 2 use mounting flange ID **066750**.

** = Special version for solid wood edges.

2. Panel processing

2.1 Edge processing 2.1.7 Edge finishing tools

Working processes	Finishing plastic, veneered and solid wood edges of wood material boards. <ul style="list-style-type: none"> - Pre-cutting to remove asymmetric edge protrusions on top and bottom edges and edge trimming solid wood edges. - Profiling a bevel or round edge on top and bottom edges. - Profiling a bevel and round edges on top and bottom edges and front and back. - Profile scrapers to remove knife marks. - Flat scrapers for excellent alignment of edge and workpiece.
Workpiece material	Thick plastic edgebanding made from PVC, PP, ABS, thin plastic edgebanding made from melamine resin, veneer edgebanding, solid wood banding and edgebanding.
Machines	Single or double-sided edgebanding machines, double-end tenoners.
Application	Against feed for plastic edgebanding, preferably with feed for solid wood edge lippings.
Technical features	The tools are designed for the machine, the diameters and axial dimensions match the positions of the tracing rollers. Constant diameters are required for traced tools, ideally cutterheads with replaceable tips or DP tools that are not sharpened. Sharpening on the periphery is only possible with additional tracing rollers.
Chip disposal	Tools marked with the symbol  <i>iC system</i> are optimised for these machines, and guide the chips from the tool cutting edge into the extraction. Even at low extraction air speeds more than 97% of the chips are collected. This improves not only process efficiency and productivity, but also the working environment. New machines require less extraction.

Pre / finishing edge trimming cutter

Application:

To trim edgebandings on horizontal spindles or for bevelling with inclined spindles.

Machine:

Single or double-sided edgebanding machines.

Workpiece material:

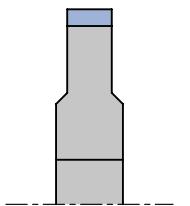

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

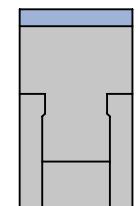

HW/DP tipped tools with cylindrical bore. DP tools - 3 mm tip height.

Jointing cutter

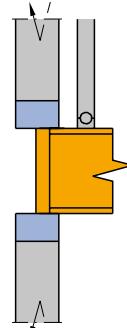

WF 200 2, WF 200 2 DP, WF 210 2 DP

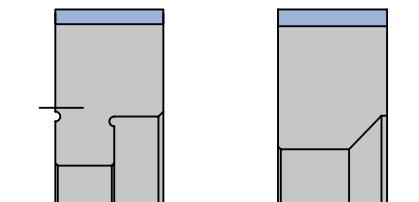

Type 1

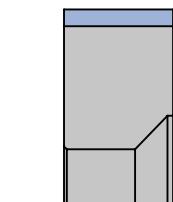

Type 2

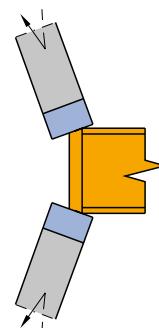

Trimming of edges on horizontal spindle
- top motor tracing.

Type 3

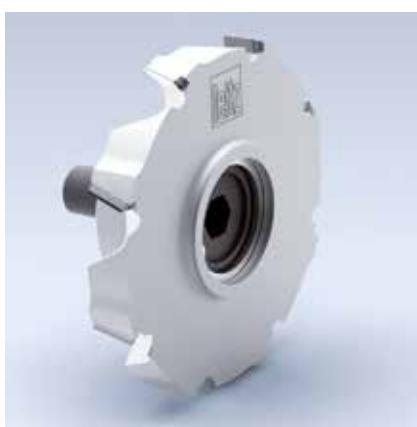

Type 4

Pre / finishing edge trimming cutter *iCsystem*

Application:

To trim edgebandings on horizontal spindles or for bevelling with inclined spindles.

Machine:

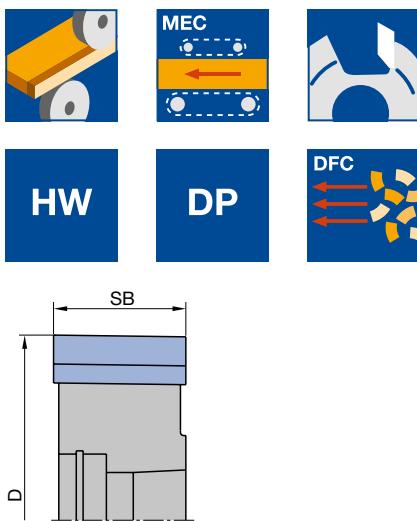

Single or double-sided edgebanding machines. Machines combined with special extraction hood i-System for efficient chip clearance.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

HW/DP tipped tools with HSK 25 R adaptor and a special extraction hood i-System for efficient chip collection (approx. 97%) with reduced extraction energy consumption. Clean workpieces, no interference with scanning aggregates and less rework. High concentricity.
DP tools - 3 mm tip height.

Jointing cutter *iCsystem* - HSK 25 R

DP jointing cutter with HSK 25 R adaptor

Type 1: WW 200 2 25

Type 2: WW 200 2 06

Pre / finishing edge trimming cutter cutterhead design

Application:

To trim edgebandings on horizontal spindles or for bevelling with inclined spindles.

Machine:

Single or double-sided edgebanding machines.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

Cutterhead with turnblade knives, cylindrical bore or HSK 25 R adaptor.

Jointing cutterhead

Profile cutter *iSystem*

Application:

For a choice of radii or bevels on edgebandings.

Machine:

Single or double-sided edgebanding machines. Machines combined with special extraction hood i-System for efficient chip clearance.

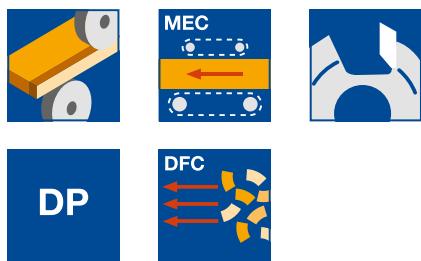

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

DP tipped tools with HSK 25 R adaptor and special extraction hood i-System for efficient chip clearance (approx. 97%) with reduced extraction energy consumption. Clean workpieces, no interference with scanning aggregates and less rework. Profile combination of routing with e.g. radii of 2.0 and 3.0 mm and bevel 20°. High concentricity.

DP tools - 3 mm tip height.

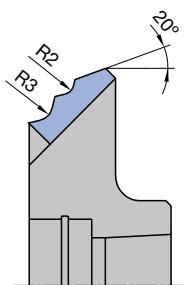

Multi-profile cutter *iSystem* - Diamaster PRO, HSK 25 R

Multi-profile cutter i-System

Profile cutter *iQsystem*

Application:

For a choice of radii and bevels on edgebandings. Corner rounding on leading and trailing edges and radius/bevel on top/bottom edges.

Machine:

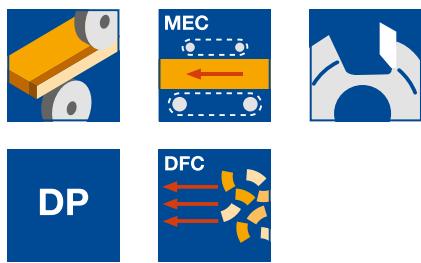

IMA edgebanding machine with KFA aggregates.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

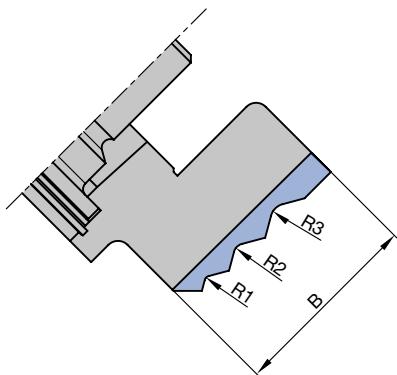

DP tipped tools with HSK 25 R adaptor and special extraction hood i-System for highly efficient chip collection (approx. 97%) with reduced extraction energy consumption. Clean workpieces, no interference with scanning aggregates and less rework. 3 mm tip height. Constant diameters. Low noise.

2. Panel processing

2.1 Edge processing 2.1.7 Edge finishing tools

Profile cutter *iQsystem*

Application:

To round (profile trim) edgebandings on FK31 aggregates.

Machine:

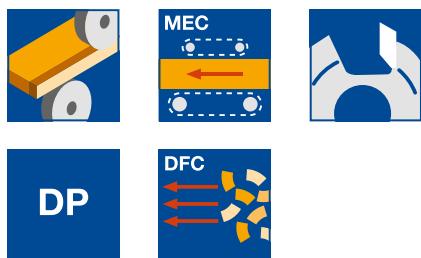

Homag edgebanding machines with profile FK31 trimming aggregate.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

DP tipped tools with bore for mounting as set on the tool adaptor. DFC design for highly efficient chip clearance of more than 97%. D_0 = constant reference diameter. Low noise DP tool - 3 mm tip height. Maximum concentricity.

Profile cutter flexTrim

Application:

For multi-profile cutting with radii and bevelling of edges. Combination of two profiles for automatic profile resetting in the workpiece gap.

Machine:

Homag edgebanding machines for cutting units types FK11, FK20, FK21, FF12, FF32, PF21 with flexTrim cutting head.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

2 part DP composite tool for setwise application. DFC design for efficient chip collection. Maximum processing quality through high running accuracy and quiet running. D_0 = constant reference diameter, RPM $n_{max} = 18,000 \text{ min}^{-1}$.

2.1 Edge processing

2.1.7 Edge finishing tools

Profile cutterhead / bevel cutterhead

Application:

To round and bevel edgebandings.

Machine:

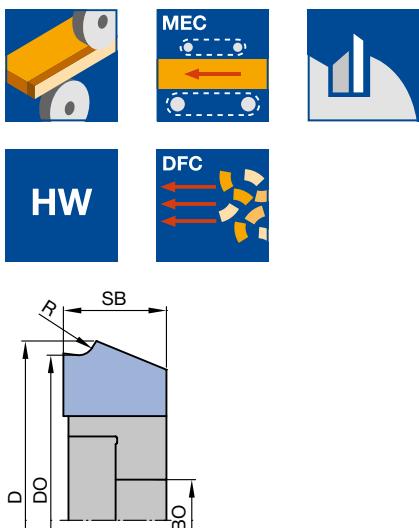

Single or double-sided edgebanding machines. Machines must be equipped with DFC system.

Workpiece material:

Plastic, softwood, hardwood and veneer edgebander.

Technical information:

Cutterheads with HW knives and cylindrical bore with DKN. D_0 = constant reference diameter. DFC design for highly efficient chip clearance of more than 97%.

Various profiles - DFC, Brandt

Multi-profile scraper

Duo multi-profile scraper Type 1
(all profiles in Duo design)

Duo multi-profile scraper Type 2
(2 profiles in Duo design)

Profile scrapers

Application:

For scraping edgebandings with radii or bevels. Especially for colour fastness and anti-stress whitening for dark edges and high gloss PMMA edges.

Machine:

Single or double-sided edgebanding machines or double-end tenoners.

Workpiece material:

Plastic edgebandings as PP, ABS, PMMA, etc.

Technical information:

Duo multi-profile scraper with different radii and bevels for 4 profiles in total.
Staggered cut on two consecutively arranged scrapers with special micro geometry for high edge quality, colour fastness, high gloss level and without stress-whitening. Especially in conjunction with jointless edgebanding.

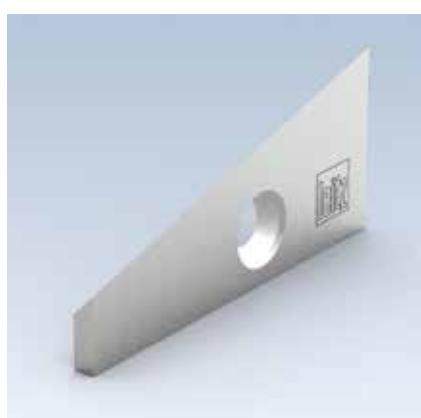

Attention: Only applicable on standard scraper aggregates with special profile scraper holders.

Break outs at edge of workpiece end grain, back	<ul style="list-style-type: none"> - Adjustment of the controlled scoring motor not level with the hogging unit in feed direction - Poor quality of middle layer of workpiece material (large chip flow, poor pressing) - Insufficient number of teeth, feed speed too high - Incorrect tooth shape and angle geometry 	<p>Check movement of the jump scoring motor and correct adjustment to the hogging unit</p> <p>Improve by removing resin and sharpening tools more often</p> <p>Increase number of teeth or adjust feed speed</p> <p>Check and adjust through resharpening</p>

Rounding of the cutting edge

When hogging solid wood and wood-derived materials with or without coating, the teeth of the hogging sawblade and hogger parts are subject to mechanical and chemical wear.

The surface quality determines the size of the cutting edge abrasion. An extremely worn sawblade tooth requires additional sharpening and reduces the number of possible resharpenings.

Typical cutting edge wear when machining solid wood.

Cutting edge destruction**through improper use**

If the relationship between the number of teeth and feed speed is incorrect, the cutting forces will be too high when hogging solid wood, especially with a high moisture content. This leads to choking the gullet and consequently destruction of the saw tooth.

Action:

Reduce the number of teeth to increase the gullet area; adjust feed speed so the cutting quality is still adequate.

Cutting edge destruction through improper use.

Cutting edge destruction**through overstress**

If the material to be removed is wider than the cutting width of the hogger, the outside teeth of the raised hogger segments are destroyed by overstress.

The hogging width must always be smaller than the cutting width of the hogging tool.

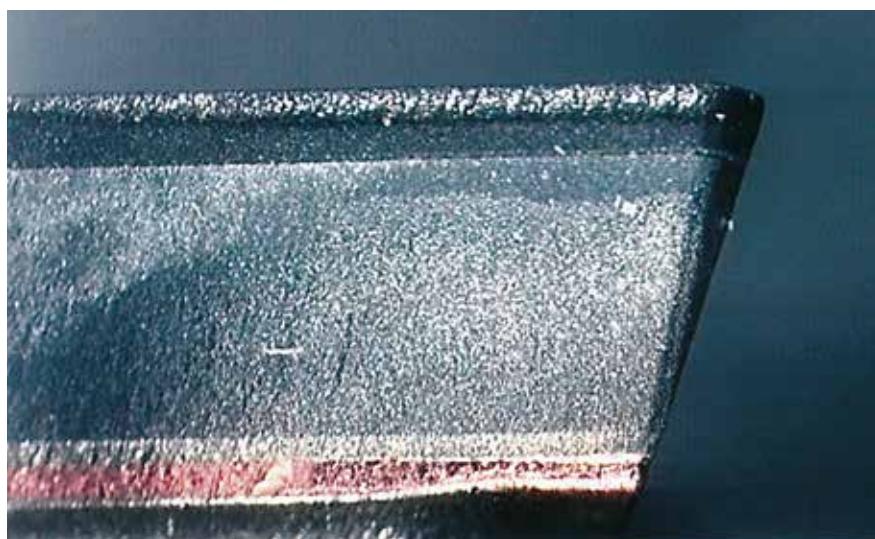

Destruction of saw tooth through overstress.

Rounding of cutting edges

The illustration opposite shows a typical blunt cutting edge, resulting from mechanical abrasion when machining uniform materials.

Removing the resin from the sides of the teeth between resharpening intervals leads to a considerably longer performance time, as it prevents the loss of side relief.

The area of wear should be approx. 0.2 to max. 0.3 mm.

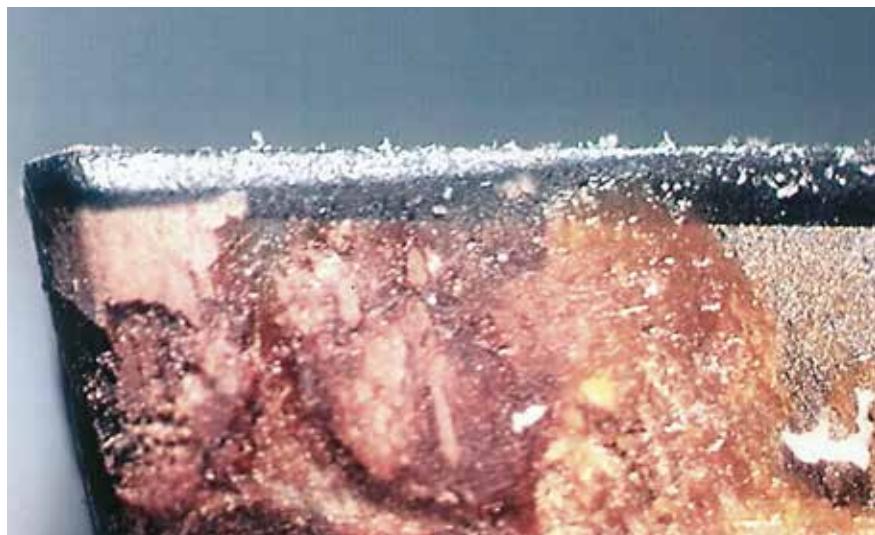

Wear to cutting edges after machining MDF.

Cutting edge rounding and resin build up

Apart from cutting edge wear, a build-up also forms at the side of the teeth from adhesive dust and chip particles (resin build-up) when the workpiece material has a high resin content or the tool has been run for a long time.

This leads to higher cutting forces and power consumption, low surface and middle layer quality and a considerably reduced tool life.

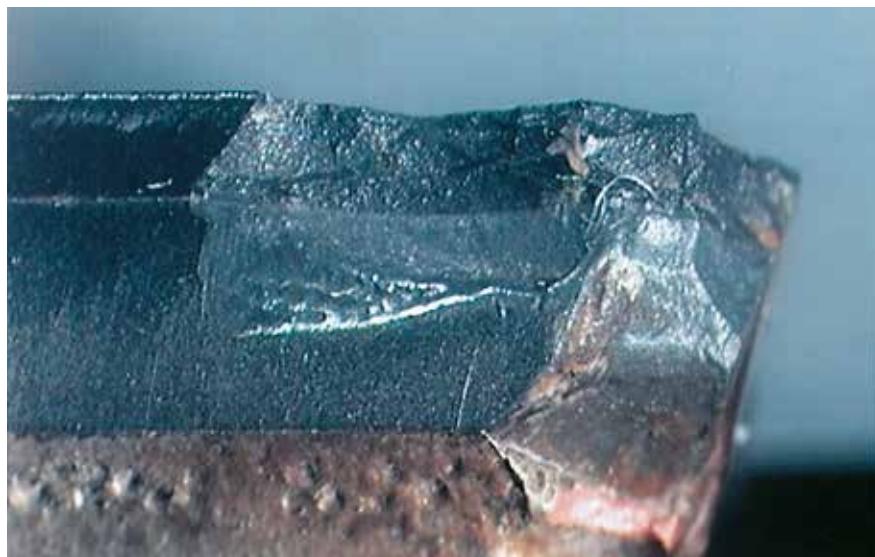

Wear to cutting edges and resin build-up after machining chipboard.

Cutting edge destruction

The cutting edges can be destroyed when machining workpiece materials with a high sand content, a grain size up to 2 - 3 mm diameter (l) or containing metallic particles.

Using DP (DIA) tools when machining such workpiece materials is problematic and use is not recommended for efficient machining.

Cutting edge destruction from metallic particles.

Diamaster WhisperCut - DFC, LowNoise, aluminium alloy tool body	7	
Diamaster WhisperCut EdgeExpert - DFC, LowNoise, aluminium alloy tool body	10	
Diamaster WhisperCut EdgeExpert mounted on hydro sleeve	12	
Diamaster WhisperCut PLUS EdgeExpert - DFC, LowNoise, aluminium alloy tool body	11	
Duo multi-profile scraper	59	
E	Profile cutter / bevel cutter for stationary machines.	62-63
Edge finishing tools	30-63	
Edge processing	2-63	
End trim sawblades	28-29	
F	Profile cutter flexTrim	45
Finishing cutterhead	68	
Flat scraper knives	60	
Flat scrapers	60	
G	Profile cutter flexTrim3	46
Grooving cutter for mechanical feed	25-27	
Grooving cutters	26-27	
H	Profile cutter i-System	40-44
Hogger for sizing unit	70	
Hogger for splitting unit	71	
Hoggers	22	
Hogging sawblade	70-71	
J	Profile cutter Multi-Edge	48
Jointing / milling cutter	13	
Jointing / milling cutter on HSK-F 63 arbor	13	
Jointing / milling cutter on hydro sleeve	12	
Jointing cutter	31	
Jointing cutter i-System - HSK 25 R	32	
Jointing cutterhead	33	
Jointing cutters	4-14, 31	
M	Profile cutter QuattroForm	47
Multi-profile cutter - Diamaster PRO	39	
Multi-profile cutter i-System - Diamaster PRO, HSK 25 R	41	
Multi-profile cutter i-System - Diamaster PRO, HSK 25 R, KFA aggregate	42	
P	Profile cutterhead / bevel cutterhead design	33
Postforming processing	64-68	
Postforming tools	66-68	
Pre / finishing edge trimming cutter	31	
Pre / finishing edge trimming cutter - i-System	32	
Pre / finishing edge trimming cutter cutterhead design	33	
Profile cutter	36-39	
Profile cutter / bevel cutter for stationary machines.	62-63	
Profile cutterhead / bevel cutterhead for stationary machines	61	
Profile knives for edge finishing	52	
Profile knives for system Biesse	52	
Profile knives for system Holz-Her	52	
Profile knives for system Ott	52	
Profile scrapers	54-59	
Profile scrapers - Holz-Her, aggregate ZK701	56	
Protection milling / jump cutting	14	
R	Radius cutter DP - Homag	62
Radius scrapers with anti-stress whitening bevel	55	
Rebating cutter	67	
S	Segment hogger for sizing unit	70
Segment hogger for splitting unit	71	
Segment hoggers	23-24	
Segment hoggers for sizing	69-71	
Segments for DFC hogger (6 pieces / hogger)	24	
Segments for non-Leitz segment hogger	24	
Spare circular sawblade for DFC segment hogger	24	
Spare circular sawblade for segment hogging set	23	
Spare knives for finishing cutterheads	68	
Spare segments for segment hogger	23	
Steel basic and extension hoggers without flanged sleeve	23	
T	Turnblade knives - scrapers	54
W	WhisperCut jointing / milling cutter - cutterhead design	7-11

Key to pictograms

	Scoring hogging		Tipped tool
	Hogging		Light alloy body
	Double hogging		Interchangeable knives
	End trimming		Mechanical knife clamping, reversible
	Edge trimming		Resharpenable cutting face
	Grooving, horizontal and vertical		Resharpenable clearance face
	Jointing		Low noise
	Rebating		Optimised chip flow
	Profiling		Tungsten carbide
	Profiling joints		Polycrystalline diamond (PCD)
	Mechanical feed
